

## Garment Hamper

BioSafe garment hampers from Terra Universal are convenient receptacles for reusable garb worn by cleanroom and laboratory personnel. Made of cleanroom-compatible white polypropylene, the hamper resists damage from common chemicals used in lab applications and for cleaning. Garments with caustic chemical spills are safely contained.

The hamper lid opens hands-free using the recessed foot pedal, helping to maintain cleanliness ratings by preventing cross-contamination. A soft-close mechanism is used so that the lid closes slowly and quietly, keeping both air turbulence and decibels at a minimum.

---

Standard hampers have a capacity of over seven cubic feet, but custom sizes are available.

Terra Universal has nearly 40-years of experience manufacturing furnishings for cleanrooms, gowning rooms and laboratories.
